Anvaya, for banks and insurers

The thread that connects generations

Team Saathi · BFSI track · Revision 2, 30 September 2026 · the full picture is in concept.md; the pitch to individuals is in pitch-individuals.md; costs and margins are in business-model.md; how it is built is in architecture.md

The moment that defines the relationship

Every institution will one day meet a family on the worst week of their lives. A customer has left them suddenly. There was no goodbye, and no folder on the shelf. The family doesn't know which accounts existed, who the nominee is, or where the papers are.

How that family is treated in that week decides whether the next generation stays with you, or quietly moves everything elsewhere. And more and more, it is also a matter of regulation. In India, since 2026, it comes with a clock and a penalty attached.

Why now

Regulators across Asia are making the family's claim faster, simpler and measured. In India it is now a time-bound obligation.

In India *(the deadlines and penalties below are Indian rules; other countries follow)*

What changed	What it means for you
Indian banks: a 15-day deadline (RBI). Claims on the deposit accounts of a customer who is no longer here must be settled within **15 calendar days** of receiving all required documents. In force by 31 March 2026.[1]	If the delay is the bank's, it pays interest of **at least Bank Rate + 4%** on the amount due, and **₹5,000 a day** for lockers and safe custody. The clock starts only when the file is complete, so incomplete files are where the time and the complaints go.
Indian life insurers: 15 days from intimation (IRDAI). Life claims not needing investigation must be settled **within 15 days of intimation**; those needing investigation, within 45 days.[2]	Late settlement costs **bank rate + 2%** from the day of intimation. For an insurer, the clock starts before the documents arrive.
Up to four nominees. From 1 November 2025, Indian bank depositors can name up to four nominees, together with their shares or in order.[3]	Every customer's nomination is worth revisiting, and most won't do it unprompted.
Unclaimed money is a national priority. RBI paid banks up to 7.5% of the amount to return inoperative and unclaimed deposits (October 2025 to September 2026)[4], and a joint RBI, IRDAI and SEBI campaign returned ₹5,777 crore across 748 districts.[5]	The regulator measures how well you reunite money with families. Preventing the money going unclaimed in the first place is the cheapest way to do it.
Data protection is arriving in phases. India's DPDP Rules were notified on 13 November 2025, with consent managers from November 2026 and full obligations from May 2027.[6]	Any service touching customer data must be consent-first by design. Anvaya is built that way.

Across the rest of Asia *(different rules, the same direction)*

Where	What changed	What it signals
Hong Kong	The HKMA backed a new banking practice (14 April 2025) letting banks pay estate administrators the actual balance without waiting for the grant to be amended, within set limits.[7]	Regulators want estate payouts simpler and faster
South Korea	Since 12 November 2024, life insurance payouts can be placed in trust, so family receive them on a schedule the policyholder chose.[8] The regulator's campaign to return dormant insurance money has returned over ₩16.8 trillion since 2017.[9]	Policyholders are expected to plan how their family receives money, not just who
Japan	Heirs can ask one bank to locate the family member's accounts at other banks, where those accounts were linked to their My Number, for up to 10 years.[10]	The state is building tools because families can't find the accounts
Singapore	Without a CPF nomination, savings go to the Public Trustee to distribute under intestacy law, after a fee and up to six months to identify the family.[11]	Nomination is the single biggest lever for a smooth handover
Malaysia	The Unclaimed Moneys (Amendment) Act 2024, in force 1 August 2024, moves unclaimed money to government revenue after 10 years instead of 15.[12]	Less time for families to find what is theirs

Regulators are also setting rules for automated decisions in finance: Korea's FSC guidelines take effect on 22 June 2026, and they require that people supervise automated decisions.[13] Anvaya's checks already work this way: a person decides every outcome.

The cost of families not knowing

Where	What is waiting to be claimed	As of
India	₹72,454 crore in bank deposits, moved to the Reserve Bank of India's Depositor Education and Awareness Fund after ten years untouched[14]	28 Jan 2026
	₹8,974 crore in insurance, still with the insurers[5]	28 Feb 2026
	₹3,749 crore in mutual funds[5]	28 Feb 2026
Japan	¥129.2 billion in estates handed to the national treasury because no heir came forward, the highest since records began in 2013[15]	Financial year 2024
South Korea	More than ₩10 trillion in unclaimed insurance money[16]	2026
Malaysia	RM13.3 billion with the Accountant General; only about RM4 billion has ever been claimed back since 1977[17]	April 2025
Australia	A$21.2 billion in lost and unclaimed superannuation, across about 7.5 million accounts[18]	30 Jun 2026

And it is the sudden losses that leave families least prepared. In Singapore, **2 in 5 CPF members lost before the age of 65 had named no nominee**, against about 1 in 5 overall.[19]

These totals count all unclaimed money, not only what was left behind by someone who is gone. But every family who has lost someone suddenly knows how it happens: the one person who knew about the account is the one person they can no longer ask.

For your institution	What it means
Settlement deadlines	In India, a 15-day clock, with interest or daily compensation when the delay is yours; elsewhere, regulators are pushing for faster, simpler estate payouts

For your institution	What it means
Incomplete files	Families don't know what to submit, so files go back and forth and the clock can't start
Missing or outdated nominees	Claims that need legal heirship papers, take months and generate complaints
Fraud	Forged certificates, false heirs, and people quietly using the accounts of a customer who is no longer here
Unclaimed balances	Regulatory reporting, transfers to a regulator's fund, and scrutiny of how well you reunite money with families
Losing the next generation	Heirs who go through a painful claims experience take their money elsewhere

What Anvaya is

Anvaya is a succession service you offer your customers under your brand. They talk with Saathi, Anvaya's warm companion, about their accounts, nominees and wishes. Saathi helps them close the gaps while they are here. When the time comes, the right family member receives a careful, fraud-checked handover, and you receive a complete, pre-checked claim file.

What the claim packet saves your team

Anvaya doesn't replace your settlement process, and it doesn't certify legal heirship. Your staff still verify and decide, under your own policy. What changes is **what arrives on their desk**.

Today	With Anvaya
The family doesn't know which of your products the customer held	The packet lists every account and policy the customer recorded with you
Documents arrive piecemeal and incomplete; the file goes back and forth	The family is guided to the exact documents your process needs before the file reaches you
Forged or wrong certificates are found late, by hand	Every certificate is checked for forgery, the wrong person and the wrong document, and **two independent reviewers** confirm the loss and the claimant's authority, each with a logged reason
Nominee details are missing or outdated	Nominees were reviewed with the customer while they were here, and Saathi can prompt a review when life changes, such as a marriage or a new grandchild
A mistaken or fraudulent report surfaces after payment	A **waiting period**, during which the customer's own phone can cancel the case, before anything is released

Who is responsible for what

- **Anvaya** is responsible for its checks and reviews being carried out as described, with a complete audit record, and stands behind that under contract.
- **Your institution** remains responsible for the settlement decision, as the regulations require.
- **The family** receives guidance and draft letters, never legal advice. Legal help comes only from licensed partners.

Fraud protection at every step

Fraud doesn't only arrive with a forged certificate at the end. It can enter at any point in the journey. Anvaya runs a **guardian**: an independent layer of checks that watches every step and corrects course before anything takes effect.

Where fraud can enter	What the guardian does
Someone else on the customer's phone, or a cloned voice	A voice alone never authorises anything important. Important actions need confirmation on the customer's own device, and high-risk requests need a spoken random phrase. Suspicious audio and new devices raise the risk level.
Pressure on an elderly customer	Signs that someone is pushing the customer to change their wishes or recipient put the change on hold. The customer is checked with privately, later. This is a duty of care your teams will recognise.
A sudden change of recipient or nominee	Changes from a new device, after a long quiet period, or while a case is open get a cooling-off delay and a separate confirmation. They are blocked during an open claim.
A forged certificate or false claimant	Checks tuned to each document type and country, and refreshed from research into new forgery tactics; fixed rules (customer active recently, impossible dates, wrong number format, a certificate used before); then two independent reviewers.
A false report of passing	The customer is told straight away, with a one-tap cancel link, and a waiting period follows.
A family member probing for more than they're entitled to	Questions stay within the recipient's entitlement. Hidden instructions in uploaded documents are caught. Every question is kept for audit.
An insider	Cases are assigned to reviewers at random. Reviewers linked to a case are excluded. Unusual reviewer patterns, such as frequent overrides or the same pair appearing repeatedly, trigger a third check.

How it responds: continue; add a check; reduce what the service may do on its own; pause for a reviewer and alert the customer; or block. **People decide.** Every intervention is explained, logged, open to review, can be reversed, and is measured. The service also red-teams itself: it regularly imagines new ways to get around each safeguard, and shows your risk team which safeguard catches each one, and which nothing catches yet.

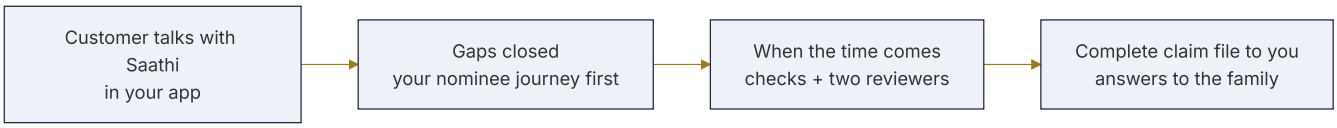

What you get, and how we'll measure it

What you want	How Anvaya delivers it	What a pilot measures
More complete nominations	Saathi notices missing or outdated nominees and takes the customer straight into your own nominee-update journey	Share of pilot customers with a complete nomination, before and after
Faster settlement	Complete, pre-checked files mean the settlement clock (15 days in India) starts sooner and finishes on time	Days from first contact to complete file; share settled within the regulatory deadline
Fewer rejected or reopened claims	Documents and authority are checked before the file reaches you	Share of files needing more documents
Less fraud, at every step	A guardian watches every step of the journey, not only the claim: forgery checks, two independent reviewers, owner alerts, protection against pressure on elderly customers, cloned voices and insider collusion	Suspect cases caught before reaching you; guardian interventions and false-alarm rate
Fewer unclaimed balances	Every account the customer mentions lands on the family's checklist	Accounts claimed that the family didn't know about

What you want	How Anvaya delivers it	What a pilot measures
The next generation	The heir's first real experience of your institution is a kind and helpful one	Heir retention after settlement
Engaged customers	A warm, useful reason to open your app, in the customer's own language	Sign-up and repeat use

How it works

1. **While your customer is here.** They tap the microphone in your app and talk, by voice or text, in their own language. They can share a photo of a policy and Saathi reads it. Saathi suggests what to record, and the customer taps **Keep** or **Not now**. It flags gaps, such as "no nominee on this policy", as simple next steps.
2. **Closing the gaps.** Nominee updates go through **your own journey**; Saathi guides the customer there but never changes your records itself. When a step needs a professional, such as a will writer or safekeeping, Saathi shows vetted options with prices. **Your own products appear first**, clearly labelled as yours.
3. **When the time comes.** A family member uploads the official certificate from the registrar. Automated checks look for forgery, the wrong person or the wrong document, and explain what they found. **Two different reviewers** then decide: one confirms the loss, the other confirms the family member's legal authority. Overriding the checks needs a written reason, and every step is logged. A waiting period follows, during which a mistaken case can be cancelled from the customer's own phone.
4. **The handover.** The chosen family member unlocks the customer's vault on their own phone, asks Saathi questions and receives a checklist and draft letters. **You receive the claim packet.**

Integration

Option	What it is	What we need from you
Branded app	Anvaya under your brand, launched from your app or website	Your branding and sign-in (single sign-on)
Inside your app	Anvaya's screens embedded in your mobile app	Single sign-on, and a place in your app's menu
Claims connection	Claim packets delivered securely into your claims or case system	A secure intake point, and your document checklist
Your products	Your nominee journey and products shown first	Links into your nominee-update journey and product pages

Anvaya never needs access to your core banking or policy administration systems. Most pilots start with the branded app and the claims connection, and add in-app embedding later.

Security, privacy and governance

We expect your risk, security and compliance teams to test every line of this section.

Data: what is held where

Data	Where it lives	Who can read it
Passwords and secrets (the vault)	Encrypted on the customer's phone	Only the customer, and after a verified handover, the one person they chose. Not Anvaya, not you
Conversation records: accounts, nominees, family, wishes	Encrypted on Google Cloud. The prototype runs in Singapore; for Indian institutions, production data is kept in Google Cloud's India regions	The customer; Anvaya's service, to answer and prepare the handover; and, after a verified handover, the chosen family member
Voice recordings the customer chose to keep	Encrypted cloud storage	Released only to the verified recipient; never used to copy anyone's voice
What you receive	The claim packet for your own products only	Your claims team

What you see, and what you don't. You receive information about your own products only. Accounts the customer holds elsewhere go on the family's checklist, not to you, unless the customer explicitly agrees.

Processors. Anvaya runs on Google Cloud, including Google's language and voice services, used on paid terms under which customer content is not used to improve Google's products.[20] We'll provide the full list of processors and data flows for your due diligence.

Regulation. *(India shown; for other countries we map the equivalent rules during due diligence.)*

- Anvaya is designed to be engaged as a technology service provider under the **RBI Master Direction on Outsourcing of IT Services**,[21] including your right to audit, and access for the regulator.
- Consent is built in at every step, in line with the **DPDP Act and Rules**:[6] nothing is saved without the customer's Keep, and nothing is shared with a partner without their agreement.
- Automated checks are governed to the standard of the **RBI's August 2025 framework for responsible automated decision-making**:[22] a person decides every outcome that affects a claim, overrides need a written reason, every step is logged, and check accuracy is tested and reported.

Certification. Anvaya is at prototype stage and is not yet certified. Before any pilot with live customer data, we will complete an independent penetration test; ISO 27001 and SOC 2 Type II are on the roadmap.

Guardrails that protect your brand.

- No legal or financial advice from Saathi; only licensed partners give it.
- No selling beyond your own clearly labelled products; no partner can pay for placement.
- Answers to families come only from what the customer actually recorded, with the source shown. Saathi says so when something was never recorded.
- Every typed reply is checked automatically before it is shown, for example for claiming something was saved when it wasn't, and rewritten if it breaks a rule. The same checks will extend to advice and selling before any pilot.
- No voice cloning, no avatars.

Continuity. A succession service must outlast its vendor. Our commitments:

- **Escrow** of the software and the keys needed for release, with an independent escrow agent, so a verified handover can still happen if Anvaya ceases to operate.
- **Export** of your customers' records at any time, in an open format.
- **Exit support**, with a defined transition period if you end the licence.

Commercial model

Who	How it works
Your institution	A yearly licence per enrolled customer, indicatively ₹499 a year in India.[23] Outcome-linked pricing, such as a fee per complete claim file, is open for discussion
Your customers	Covered by your licence. They can upgrade to a family plan that brings their spouse and parents in
Partners	A flat listing fee, or per introduction where the rules allow; no commission where professional rules forbid it, such as legal advice
Families	**Never pay for the handover**, which includes a generous allowance of questions, checklists and letters; extras beyond it are optional

Getting customers to start

Nobody opens a succession app on a quiet Tuesday. Offering Anvaya through your institution solves the hardest problem in this category: **you already know the moments when the question comes up naturally.**

Moment	Who sees it	Natural prompt
Buying or renewing a life policy	Insurer	"Who should receive this, and do they know it exists?"
An empty or outdated nominee field	Bank	"Your account has no nominee. It takes two minutes with Saathi."
New nomination rules, such as India's four-nominee change (November 2025)	Bank	A reason to reach every existing customer, not only new ones
Opening an account, a fixed deposit maturing, a home loan	Bank	A short step inside a journey the customer is already on
Marriage, a new child or grandchild, turning 50 or 60, retirement	Either	"Your family has grown. Let's make sure they're looked after."
Tax-filing season	Either	"While your papers are out, let's note where everything is."

The framing is always about looking after the family and getting organised, never about the end. Prompts appear in your app, from your relationship managers, or at the branch, and each one opens straight into a conversation with Saathi about that one thing.

Prompts linked to your journeys need notifications and signals from your systems; both are part of the integration work and not yet built.

Families across borders

Families across borders. Many families hold assets in more than one country, or more than one state: an engineer in Singapore with a flat in Karnataka and investments in Mumbai. Saathi gives no legal advice, so it doesn't decide which country's law applies. What it does:

- records **where each asset is**: the country and, in India, the state, since property transfer rules differ by state;
- flags the complexity plainly: *"You have assets in two countries; your family may need a lawyer in each"*;

- shows **partners licensed in each jurisdiction**, and cross-border estate specialists where available;
- groups the family's **checklist and letters by country**, so they can see what each place needs.

Which law applies, and in what order, stays with licensed lawyers.

The pilot we propose

Scope	One customer segment where the value is clearest, for example savings or life customers aged 50 and over, in two or three languages
Length	Six months
Integration	Branded app plus the claims connection; no core-system changes
Success measures	Guardian interventions and false-alarm rate, uptake at each trigger moment, nomination completeness, days to complete file, share settled within the regulatory deadline, files needing more documents, sign-up and repeat use, customer satisfaction
Before live data	Your security review, an independent penetration test, and data kept in-country where required (India regions for Indian institutions)
Pricing	A fixed pilot fee, credited against the first year's licence if you continue

One story, from your side

> **Vikram, 58**, a long-standing customer, opens Anvaya inside your app one evening. Over a few conversations he records his accounts, and Saathi notices his policy has no nominee. It takes him into your nominee journey, and he adds his nephew Ajay. Prompted by Saathi, he also finds a will writer for the flat in Mysore.
>
> Years later, Vikram leaves us suddenly. His daughter **Priya** isn't ready; nobody ever is. She uploads the certificate, the checks find nothing suspicious, and two reviewers confirm.
>
> **Your claims team receives a complete, pre-checked file** on day one: the verified documents, the review record and the nominee details. India's 15-day clock is comfortable, not a race. Priya receives answers in her father's own words, and a checklist for every other institution.
>
> The goal: when Priya chooses where to keep what her father left her, she chooses you.

Where we are today

The working prototype covers the conversation, next steps, the vault, the two-reviewer verification and waiting period, and the family's questions and letters. The marketplace is shown with one mocked legal partner.

Not yet built: the guardian layer across every step (in progress for the prototype release), prompts at trigger moments and notifications, the claims connection and packet format, single sign-on and in-app embedding, per-role permissions, India data residency, real recordings and voice letters, and the full partner catalogue. See release-notes.md.

Let's talk

We are looking for one bank and one insurer to shape the pilot with us: to be the institutions families remember as the ones that helped, and to meet the new deadlines with room to spare. We'd welcome the chance to show you Anvaya running.

Nobody can choose when they leave. Anvaya makes sure the families you serve are not left without answers, and not left looking elsewhere.
